

ABSTRACT OF THE DISCLOSURE

A ground connector for use with an associated distribution transformer which includes a base. The base includes a fixed jaw and a spade connector for attaching the base to the associated distribution transformer. The ground connector also includes a movable member with a movable jaw which includes guide surfaces dimensioned and configured for sliding engagement with guide surfaces of the base to guide movement of the movable jaw with respect to the base. The fixed jaw and the movable jaw form a vise-type clamp which may hold the associated cable generally tangentially to the associated distribution transformer when the ground connector is installed on an associated distribution transformer.
